

NOTICE

MUNICIPALITY OF CALLANDER DRINKING WATER SYSTEM June 28, 2018

Please be advised that the Municipality of Callander Operations Department in conjunction with the Ontario Clean Water Agency will be conducting routine “Water Main Valve Maintenance” on the entire Municipal Drinking Water Distribution System beginning now and continuing to July 31, 2018. This operation will be conducted during the hours of 7:00 AM to 5:00 PM.

As a result of this process you may encounter some discoloration, rust, or sedimentation and/or loss of pressure. Although the water has been properly disinfected you may not wish to ingest it. It is advised to refrain from using both hot and cold water to avoid pulling the discoloration, rust, or sediment into your house, laundry, fixtures/appliances. You may wish to keep some drinking water on-hand to utilize during the flushing operation.

If you notice discoloration, wait until the operation is completed and then run your cold water starting from the first tap in your plumbing system, with the aerator removed, until the discoloration clears which should take about 15 to 20 minutes. If the discoloration continues, wait a little longer to allow settling of the rust/sediment, and then run your taps again.

We apologize for any inconvenience and thanks you for your patience and cooperation. For any inquiries or concerns, please call the Callander Operations Department at 752-1010.
